1. Objective

To build a responsive web page using HTML, CSS, and Bootstrap 5 that contains:

- A navbar with the logo on the left, links in the center, and a cart icon on the right. Below 768px it collapses into a hamburger menu.
- A product grid that shows 4 columns on desktop, 2 on tablet, and 1 on phone.

The focus is on responsive mechanics rather than final visual design, so placeholder text and images are used.

2. Tools and Technologies

- HTML5 (semantic structure)
- Bootstrap 5.3.3 (via CDN)
- Custom CSS (style.css)
- Flexbox (through Bootstrap utility classes)
- Chrome DevTools (responsive testing)

3. Project Structure

Responsiveness Testing

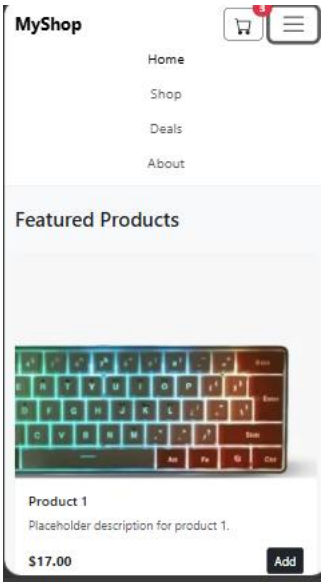

I tested in Chrome by dragging the width from 1400px down to 320px.

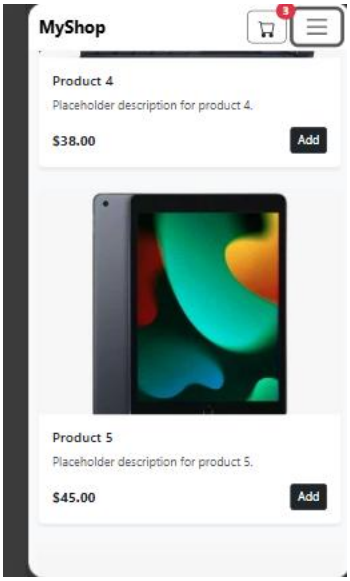

Device	Width	Navbar	Grid	Result
Laptop	1200px	Logo left, links centered, cart right	4 columns	Pass

Device	Width	Navbar	Grid	Result
Tablet	820px	Full navbar	2 columns	Pass
Phone	390px	Logo, cart, hamburger; links open on tap	1 column	Pass
