eBay Assignment 2

Product Page Design and Correction Report

1. Introduction

The purpose of this assignment is to develop a responsive product detail page for an eBay-inspired website using HTML, CSS, and Bootstrap 5. The existing project structure and stylesheet were reused to maintain consistency with the homepage.

2. Objectives

- Create a separate product detail page.
- Display product information, pricing, and images.
- Use existing CSS classes for consistent styling.
- Apply Bootstrap 5 for responsive layouts.
- Correct image paths and improve navigation.

3. Technologies Used

- **HTML5:** Structures the webpage and product information.
- **CSS3:** Controls styling, spacing, and layout.
- **Bootstrap 5:** Provides responsive grids, buttons, and navigation components.
- **Bootstrap Icons:** Displays interface icons.

4. Product Page Structure

The product.html page contains:

- **Header and Navigation:** Logo, search bar, account links, icons, and navigation links.
- **Breadcrumbs:** Help users understand their location on the website.
- **Product Image:** Displays the car floor mat using assets/floor_mat.png.
- **Product Information:** Includes the product name, condition, rating, price ($39.99), previous price ($59.99), savings, and stock status.
- **Quantity Selector:** Allows users to select the required quantity.
- **Purchase Buttons:** Add to Cart and Add to Watchlist interface buttons.
- **Shipping and Returns:** Displays important purchasing information.

- **Description and Specifications:** Explains product features and attributes.
- **Related Products:** Displays four product cards using Bootstrap's responsive grid.
- **Footer:** Maintains consistency with the homepage.

5. Corrections Made

The following improvements were made to product.html:

- Replaced duplicate homepage content with a dedicated product detail page.
- Updated the browser title to eBay Product - Premium Car Floor Mats.
- Marked Featured Product as the active navigation link.
- Corrected image references to use existing project assets.
- Reused existing CSS classes, including product-title, product-price, product-buttons, and product-related.
- Organized product information into clear sections.
- Added responsive related-product cards using Bootstrap.

6. HTML, Bootstrap, and CSS Concepts

HTML: Semantic elements, headings, images, links, buttons, number inputs, and description lists were used to organize the content.

Bootstrap: Responsive grid classes, spacing utilities, button styling, and navbar components support the layout.

CSS: Class selectors, Flexbox, Grid, margins, padding, typography, and responsive rules control the appearance of the page.

7. Testing and Verification

The following checks were performed:

Test	Expected Result
HTML parsing	Document can be parsed
Page title	Correct product-page title
Product section	Main product section exists

Image paths	Referenced image files exist
Navigation	Correct active navigation link
CSS classes	Existing classes are reused
Project files	Homepage and CSS remain unchanged

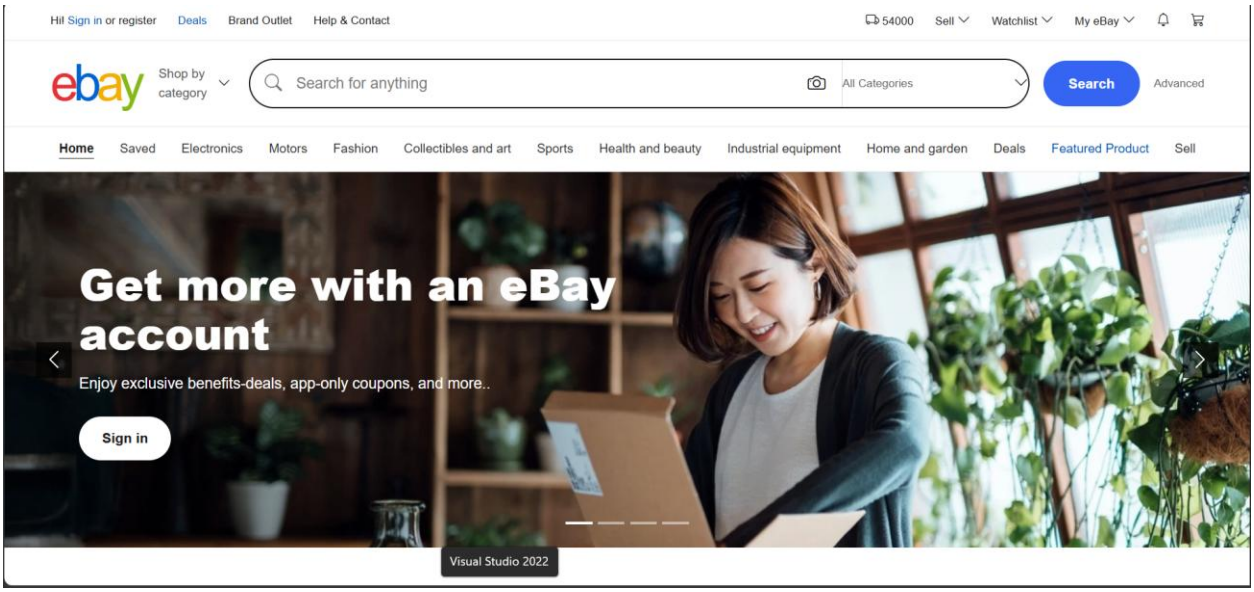

The image paths were checked, and visual testing should also be performed in a browser at mobile and desktop widths.

8. Limitations

The page provides a frontend interface only. Working cart and watchlist features, payment processing, live product information, inventory management, and database connectivity are not implemented and would require additional JavaScript or backend development.

9. Conclusion

The corrected product.html provides a dedicated and organized product detail page. It includes product images, pricing, quantity selection, purchase buttons, shipping information, specifications, and related products. Reusing existing assets and CSS while applying Bootstrap helps maintain consistency and responsiveness across the website.
